Forward Deployed Engineer

About Artificial

Artificial is building the next generation of technology for the specialty (re)insurance market. Our mission is to transform how brokers and carriers operate in complex markets by removing operational barriers and enabling smarter, faster decision-making.

We use modern technology to solve real challenges for leading brokers and insurers. By automating the repetitive and structuring the complex, we help our partners unlock new opportunities for innovation and growth.

You will join a collaborative team that values curiosity, ownership, and continuous learning. Artificial recently raised $45M (£33M) in Series B funding, enabling rapid growth and continued innovation to reshape digital insurance.

Role Background

Artificial is seeking a skilled and personable Forward Deployed Engineer to build strong client relationships while delivering tailored technical solutions. This role combines software engineering, client engagement, and solution design, and plays a critical role in proof-of-value and pilot projects that support company growth.

This is a hybrid role requiring 2–3 days per week at the London HQ or client sites in the City of London.

About the Role

Analyse prospective partners' and clients' business requirements and translate them into technical solutions using Artificial's domain-specific functional programming language, Brossa.
Codify, configure, and deliver formal specifications of insurance products across multiple lines of business.
Collaborate with Engineering, Product, and Commercial teams to design and customise solutions aligned with client strategy.
Develop deep expertise in Artificial's product suite to provide strategic guidance and recommendations.
Demonstrate product value to internal and external stakeholders.
Build and manage platform integrations and provide ongoing technical support.

About You

Strong programming foundation.
Excellent interpersonal and communication skills with technical and non-technical stakeholders.
Comfortable operating in a fast-changing scale-up environment.
Solutions-driven mindset with a focus on continuous improvement.
Strong analytical and problem-solving skills.
Ability to learn and adapt quickly to new platforms and technologies.

Preferred Experience

Experience in insurtech, insurance, or related industries.
Strong collaborative skills with a focus on product quality.
Experience working in distributed teams.

Benefits

Private medical insurance.
Income protection insurance.
Life insurance of four times base salary.
On-site gym and shower facilities.
Enhanced maternity and paternity pay.
Team social events and company parties.

Salary exchange on pension and nursery fees.
Access to the Maji financial wellbeing platform.
Company stock options via Ledgy.
Milestone birthday bonus and life events leave policy.
28 days holiday plus national holidays.
Home office and equipment allowance with company MacBook.
Learning allowance and leave for conferences or exams.
YuLife employee benefits including EAP and bereavement support.
Tree planted for each new hire via Ecologi.
Premium Italian-made coffee machine in the London office.
